

Conveyorized Tunnel

A Conveyorized Tunnel is the type of car wash that loads your vehicle onto a conveyor, and guides it through a series of detergent applications, car wash equipment and a rinse and blower system. A standard tunnel is designed to handle 90 cars per hour or more. The full-service tunnel offers the car wash operator flexibility, durability and ease of operation while focusing on two key issues; cleaner cars and higher profits. Tunnels allow for complete wash control and accuracy by including independent controls and modem-linking capability for remote diagnosis.

Drive-Thru Tunnel

Drive-Thru Tunnels Systems are ideal for automotive dealers, fleet operators and rental agencies seeking to integrate a vehicle wash center into the core operation - either as a value-added service or profit center. Requiring very minimal space and no complex plumbing or electrical work. Superior, satisfying cleaning with maximum throughput and uptime. High-quality, low maintenance components. A fast, convenient way to protect a vehicle from the elements. This type carwash typically takes less than 5 minutes.

Touch-Free

The touchless wash process is one that is completely frictionless, and no cloth, bristle or mechanical action is used to clean your vehicle. Properly balanced detergents and a high-pressure water rinse system clean your vehicle during this process. It is designed to be user-friendly and to operate in all climate and conditions and to deliver a safe and quality wash process on every vehicle. Cleaning is achieved by continuous sizing of each vehicles width and length.

Combination Touch-Free & Soft-Touch

A Combination Touch Free & Soft Cloth Carwash can also be referred to as a Hybrid Wash. It is what some carwash owners consider to be the best of both worlds. You start the wash process with the high power pressure wash of the Touch Free. Having the high pressure touch free at the beginning of the wash cycle removes debris from the car surface before the car enters into the soft touch friction wash. Then the soft touch friction wash takes over to complete the wash cycle.

Hybrid Wash

Self-Serve

For those who love to clean their own car, there are the do-it-yourself car washes, also know as Self-Serve. These types of carwashes are the kind of car wash where you wash your own vehicle with high-quality products using the wands and brushes provided by the carwash. The customer washes the car the way they like it.

Soft-Touch Friction

A Soft-Touch Friction wash operates generally the same as a friction carwash - with the distinction of using "Soft-Touch." Soft-Touch means a soft cloth or polyflex foam is used in the carwashing process for a safe, thorough cleaning; simple, yet durable, hydraulic operation for the most gentle vehicle surface massage.
